

Insight does it

TARGIT Desktop

TARGIT info directly from your Desktop...

TARGIT Desktop integrates Intelligent Dashboards and analyses with your Windows desktop and provides access to TARGIT information - before the TARGIT client has even been opened!!

Real-time Awareness of Data

With the desktop client you can watch important objects, graphs, and gauges directly from your windows desktop. You can also click on objects to see a preview of the analysis in TARGIT, and in this way **you are advised as to when**

you should log on to TARGIT to further analyze critical deviations. The feature builds on the concept of providing TARGIT users with "Real-Time" awareness of important data.

A Personal Mini-dashboard on the Desktop

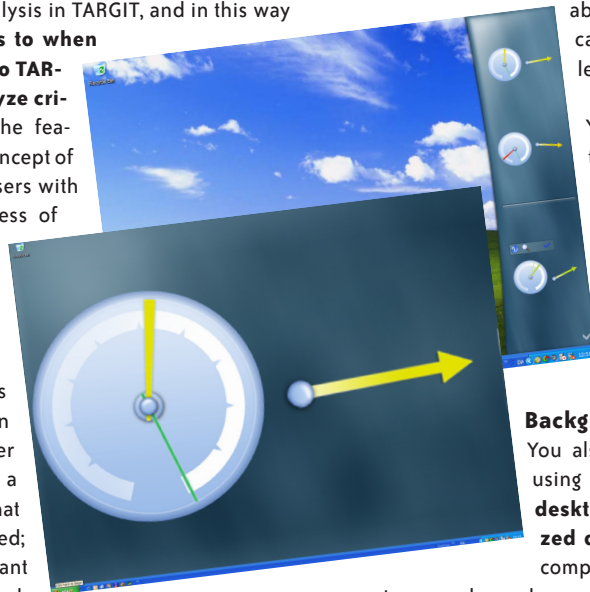

TARGIT Desktop is divided into two main sections. The upper section presents a group of gauges that you have selected; gauges that you want to watch continuously so you can follow the development of specific areas. Gauges that you want to monitor directly from your desktop are easily selected from an analysis or an Intelligent Dashboard.

Shows you Objects that are Critical Now!

The lower section changes day by day - controlled by system intelligence. The ANTServer monitors changes in data, and the system closely watches your **Key Performance Indicators**. Following, it shows you gauges and objects that are critical or estimated by

the system to have special value for you at that specific time of day. An example is gauges that indicate that you have reached a predetermined goal for the month, or issues that you have asked to be notified about that become critical ahead of the scheduled time.

You can always click on the "i" button by an object to obtain further explanation about the object - the measures, dimensions and criteria chosen.

Gauge as Desktop

Background

You also have the option of using **the entire Windows desktop as your personalized dashboard.** The entire company, individual depart-

ments, or each employee can use an object from a dashboard as an interactive background picture on the Windows desktop. This may for instance be a gauge which shows the company turnover compared to the goal. Employees will now see the gauge immediately when looking at their monitors. At the same time, TARGIT's analytical power is available within a single click, and performance is easily analyzed in-depth.

TARGIT develops business intelligence tools that help people make better decisions. Faster, easier and smarter than ever before. TARGIT Business Intelligence Suite transforms company data from almost any source into intelligent dashboards, revealing analyses and insightful reports - with fewer clicks than any other tool on the market. And since it's so simple to use, everyone in the organization gets the perspective they need to keep performance on track.
