

Insight does it

Argo International Corporation. Director of information Technologies, Franz Kistner

"With TARGIT we have a crucial solution that fulfils all of our needs. To me, the deployment of TARGIT through the web client is a key feature of the product because we are an organization that has small offices throughout the world. On top of that, TARGIT has pre-designed cubes for Aapta, Excel integration and uses Microsoft Analysis Server as the data warehouse engine."

Varian Inc, IT Manager Manith Mok

"We looked at Cognos and Crystal Reports, but found that TARGIT is a lot easier for our users to learn. It has all the functionality we need, but is much less complicated. In addition, our employees can get access to our data anywhere, anytime through a web browser – this is not an option in SAP R3."

Scandinavian Brake Systems, Financial Manager Carsten Schmidt

"Our sales staff is always able to become fully up-to-date before a customer meeting. When visiting a customer, it is also possible to use TARGIT as a tool to present sales results. The analyses do not have to be prepared beforehand. With a few clicks in TARGIT, the sales staff can make a new analysis based on the data being discussed during the customer meeting."

TARGIT NET

The web-based edition of TARGIT

TARGIT NET is the web edition of TARGIT. TARGIT NET makes it possible to stay in touch with business data anywhere, anytime. All that is required is a computer with an Internet connection and a browser.

All the Analysis Tools on the Web

TARGIT NET provides many of the features, which are known from the TARGIT Analysis and TARGIT Report clients – and it is all accessible using only a pc and an Internet browser. The mode of operation and options are exactly like what you know from the windows clients. The user interface is similar and the approach is intuitive, even for non experts. Analyses can be created, modified, saved and exchanged.

It is possible to build analyses from scratch or by using the **Meta Morphing tool** "I would like to analyze...", to choose your own dimensions and criteria, and to adjust objects according to your individual needs.

Web users also have access to the **drill-down** functionality in TARGIT, they can create **regression lines**, format axes and much, much more.

Online Reporting

Web users can also create reports by using the **Meta Morphing tool** "I would like to create a report...". It works in the exact same way as with the TARGIT Report client.

Well-suited for Multinational Companies

The web edition of TARGIT is particularly suited for companies that are spread out geographically, for

multinational companies, or for use by employees who travel much, (e.g. consultants or sales people). No matter where employees are located, they can always access critical company information.

TARGIT can translate between several languages, so the same data and analyses can be viewed and worked on across language barriers and physical distances. Everyone gets the same decision base and window into the organisation.

Information

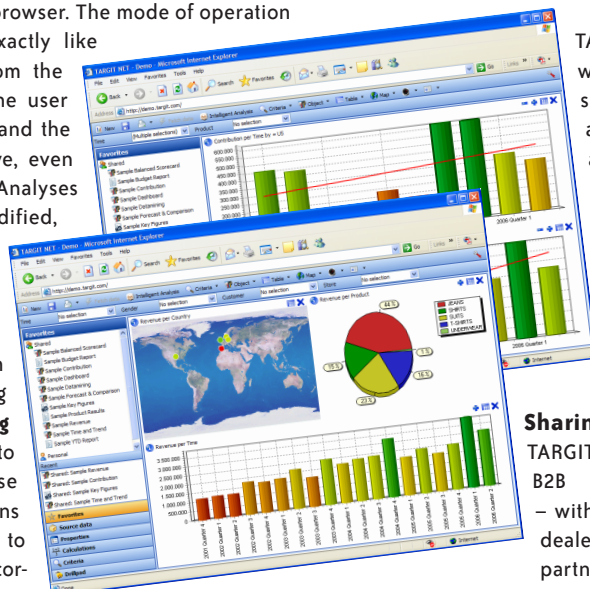

Sharing

TARGIT NET also allows for B2B information sharing – with suppliers, customers, dealers and other working partners. Access to the information can be controlled and customized for each user, and access can be given to only certain parts of the database. Users either have access to information for a particular area (e.g. geographic) or to a particular type of information (e.g. a supplier might be able to see sales of his own products, but not those of his competitors).

Information can be controlled and customized for each user, and access can be given to only certain parts of the database. Users either have access to information for a particular area (e.g. geographic) or to a particular type of information (e.g. a supplier might be able to see sales of his own products, but not those of his competitors).

Internet Explorer

Access to TARGIT NET is possible via Internet Explorer, and no further installation or auxiliary programs are required. Data security is provided through using either support from Windows Security or TARGIT's own security configuration.

TARGIT develops business intelligence tools that help people make better decisions. Faster, easier and smarter than ever before. TARGIT Business Intelligence Suite transforms company data from almost any source into intelligent dashboards, revealing analyses and insightful reports - with fewer clicks than any other tool on the market. And since it's so simple to use, everyone in the organization gets the perspective they need to keep performance on track.
