

Insight does it

Syntroleum, Senior Accountant Amanda Burns

"The company was currently using two reporting tools. The amount of time to produce reports created a lag in reporting, eliminating any sort of strong analysis because the reports were not generated for nearly a month after the close. Generation of any managerial financial statement had to be processed overnight therefore not allowing any information to be available for decision making during the working hours of the day the information was requested."

"Users may access reports at any time to check on accuracy of reporting and status of expenditures and resources. The reporting tool also allows users to use visual tools for extended analysis to drill further into the report and understand variances. In the past, the only way to understand a variance or change was to talk to accounting directly."

Varian Inc, IT Manager Manith Mok

"TARGIT is capable of providing meaningful information, and it gives the user the ability of drilling into the data. This wasn't possible in SAP R/3 using the two-dimensional reports". However, getting meaningful data is not the only advantage. "It takes less time to develop a report in TARGIT compared with the two-dimensional reports that were hard to get in SAP R3. We save money using TARGIT,"

Argo Turboserve Corporation, CIO Art Johnston

"Even though many charts and reports have already been developed, it continues to be expanded to meet all operational needs as well as financial and quality initiatives. We see it as an important decision making tool that fits well in our IT services strategy," concludes Art Johnston.

TARGIT Report

Share information with everybody ...

In TARGIT Report, complex numerical processing and analysis is combined with easy-to-use reporting facilities. The combination of TARGIT Analysis and TARGIT Report provides optimal facilities for integrated data analysis.

TARGIT Report is completely integrated in TARGIT Analysis, and users are automatically introduced to the Report functionality when opening the suite.

First-class Reporting

TARGIT Report gives you the best foundation for all types of reporting – also including advanced financial reporting.

You can transfer all data and objects from your analyses to the TARGIT report. You can even create cross-tabs of all sizes and include several cross-tabs in one TARGIT Report. The extensive cross-tab formatting functionality in TARGIT Report makes reports easy to understand and share with others.

Generate Reports in Few Mouse Clicks

The simple user-interface of TARGIT Report ensures that reports can be easily generated by everybody – specialists as well as beginners. Users will be able to generate, customize and share reports in very few mouse clicks.

With the **Meta Morphing** tool, "I would like to create a report...", users are guided through the process of setting up reports with the desired dimensions and criteria. Reports can also be created easily on the basis of existing analyses.

Everything is accomplished using normal business terms (Meta Data), so the entire working environment is easy to understand and use for users at all levels.

Share Your Knowledge

Reports made with TARGIT are easily shared with

others. Reports can be distributed automatically via the company's intranet, external portals or through e-mail, and thereby individuals, small groups, departments, or all employees in the company can receive relevant reports.

Microsoft Reporting Services is Integrated!

Microsoft Reporting Services has been integrated in TARGIT Report, giving users access to both standard and advanced reporting from TARGIT and Microsoft. Microsoft Reporting Services creates opportunities for even more functionality in the TARGIT environment.

Practical use of Microsoft Reporting Services takes

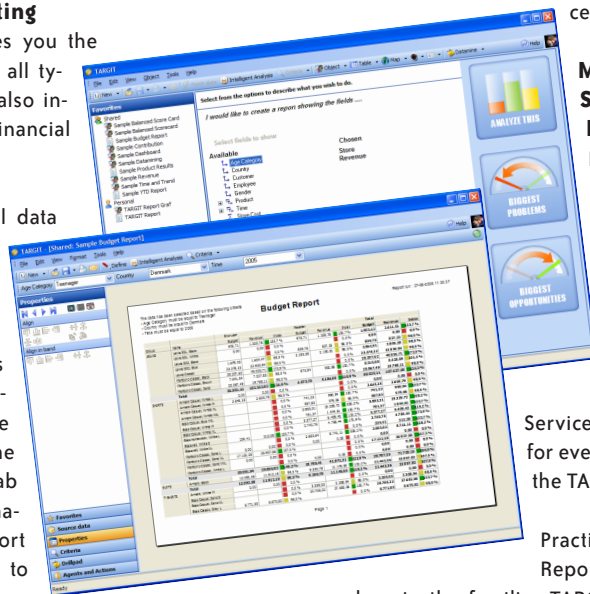

place in the familiar TARGIT environment. New reports are created step-by-step by selecting the desired element for your report in the Meta Morphing interface, "I would like to create a Reporting Services Report...".

Value-adding Features

Hyper Related OLAP - click on any figure (a calculation) in a Reporting Services report in order to look at it more closely. With a single click, you are taken to the analysis behind the figure.

Intelligent agents - you can set intelligent agents to watch figures in your reports that are relevant to you. The agent will automatically send you an e-mail notification when the selected figures deviate.

Schedule reports - once a report has been prepared, it may be scheduled for generation and distribution at any given interval. The system then ensures that the reports are sent to the right employees at the right time.

TARGIT develops business intelligence tools that help people make better decisions. Faster, easier and smarter than ever before. TARGIT Business Intelligence Suite transforms company data from almost any source into intelligent dashboards, revealing analyses and insightful reports - with fewer clicks than any other tool on the market. And since it's so simple to use, everyone in the organization gets the perspective they need to keep performance on track.
